

BAKKEN

[US Lower 48 \(/\)](#) > [Where We Operate \(/where-we-operate\)](#) > Bakken

The Bakken play is a shale interval of the Williston Basin. Our company's operations extend from Sidney, Montana, through Watford City and Dickinson, North Dakota.

ConocoPhillips produces crude oil, natural gas and natural gas liquids. Our activities in the Bakken are focused on the appraisal, development and production of the play. We hold about 620,000 net acres of fee minerals and leasehold, which are situated in one of the best locations within this liquids-rich play.

At year-end 2014, we produced an average net 50 MBOED of crude oil, natural gas and natural gas liquids.
